

**Swylite Corporation releases LST200 Series Dual Event Digital Wall Switch Timer with Backlight for Low Power CFL Bulbs at National Hardware Show 2009.**

Winter Park, FL, April 30, 2009 - Swylite® will be releasing the Model LST200 Dual Event Digital Wall Switch Timer geared for controlling CFL bulbs at the National Hardware Show 2009 in Las Vegas, NV. May 5-7. The device is an innovative Dual Event 24-hour flush mounted digital wall switch timer for residential and commercial use that provides two (2) ON/OFF events each day. The LST200 will control ultra-low power (1 watt minimum) CFL & LED bulbs, incandescent and fluorescent lighting, fans, appliances and motors while incorporating advanced technology, durable construction and overall ease-of-use. The LST200 can be wired as either a Single or 3-way switch with no additional set-up and takes less than 5 minutes to program.

Swylite Corporation will also be releasing soothing blue backlit versions of both the LST200 and phenomenally successful Single Event LST100 timer which enables the users to easily read and use the switch in dimly lit or dark areas. Available colors for all products are white and ivory with sleek, elegant black being introduced at the NHS2009 for the contemporary homeowner and commercial office decors.

Randy Morrison, President commented "With the people, products and energy conservation laws becoming more and more energy efficient, the industry needs a device that can operate CFL lighting automatically below the 40 watt range while providing multiple ON/OFF cycles. Most CFL & LED bulbs are in the 3 – 12 watt range and can't be operated by other timers. Our devices break through this barrier while providing added security and reduced energy consumption to the home or workplace."

Swylite Corporation designs and builds innovative lighting and energy control devices for residential, commercial and light industrial automation. For more information, call 407-673-6544 or visit [www.swylite.com](http://www.swylite.com).
